HUNTING AND HARVEST REPORT

PREFACE

1994 DEER HUNTING AND HARVEST REPORT

Survey Approach

Resident and nonresident deer license holder samples were randomly selected from a population of all resident and nonresident deer license holders in our license database. Deer hunting and harvest data were acquired via telephone for resident license holders and via a mail survey for nonresidents.

Definitions

TOTAL HUNTERS	The number of hunters who hunted one or more days
TOTAL HUNTER DAYS	Sum of whole days or portions of days hunted
SUCCESSFUL HUNTERS	The number of hunters who killed one or more deer
PERCENT SUCCESS	The number of successful hunters divided by the total number of hunters and multiplied times 100
RSDNT	A symbol for resident
NRSDNT	A symbol for nonresident
ANTL-	A symbol for antlerless
ANTL+	A symbol for antlered
UNKWN	A symbol for unknown used to designate unknown sex
GEN A	An abbreviation for general deer "A" license, including those deer "A" licenses included with the resident Sportsman's license and nonresident Big Game Combination and Deer Combination licenses
GEN MR WT	An abbreviation for general, Multi-region, Antlerless Whitetail Deer B license
GEN MR MD	An abbreviation for general, Multi-region, Antlerless Mule Deer B license
SP	An abbreviation for special license or permit
UNKNOWN	A license category where the license used to take the deer was unknown
LOWER	Lower confidence limit at a level of confidence of 80 percent
POINT	The estimated value
UPPER	Upper confidence limit at a level of confidence of 80 percent

Explanations

The deer hunting and harvest statistics are estimates made from a sample of 54,898 questionnaires representing about 27 percent of all 204,681 deer license holders. Confidence-interval estimates are given for resident and nonresident combined hunting statistics and for mule deer, whitetail, and combined deer harvest statistics. Confidence intervals are given at the 80 percent confidence level, meaning that the actual value will be between the lower and upper limit in four out of five cases. The relative precision of the estimate increases with the size of the estimate. Regional estimates have greater relative precision than district estimates and the statewide estimates have the greatest relative precision.

(CONTINUED)

All valid response data are used in the estimates even when some data fields are missing. This is the reason for the various unknown categories given in the report. The unknown license type given in the harvest sections is used to represent deer kills which could not be associated with a particular licnese/season type. Hunting or harvest activity in an unknown or invalid hunting district within a valid region is represented as "RXX" where R is the regional number 1 through 8. An unknown district in an unknown region is represented as "XXX". The unknown district or region activities are still incorporated into the regional or state totals respectively.

Several hunting districts from regions three and four were combined beginning in 1992 to create region eight. Due to the creation of region eight, hunting and harvest trend data for regions three and four are not comparable between years before and after the creation of region eight.

Deer License Type 698-00 Problems

For the last several years, Fish, Wildlife & Parks has issued a type of Deer B license that has been valid for antlerless whitetail deer in several of the hunting districts in region six. In previous reports, we have identified this license type as "698-00". These "698-00" type deer B licenses were different than other antlerless whitetail deer B licenses because they had a longer season ending December 31, and were also valid only in some region six hunting districts. Giving the license type a unique identifier enabled us to differentiate these licenses from other deer B licenses we process and allowed us to track these licenses through the data acquisition, analysis and reporting processes.

The "698-00" license was also available during 1994, but for various reasons it was never uniquely identified or named. After the license database creation, sampling, and the completion of the deer survey, we discovered that these "698-00" licenses had been keyed during the license data entry as "Multi-region, Antlerless Whitetail Deer B" licenses because they both share the same license prefix "27". The result of this error was that we could not differentiate between the "698-00" license type and the "Multi-region" tags.

The "698-00" license is shown in the report in each of the region six districts where it was valid, but the number issued and kill statistics are reported as zero. The "698-00" license is shown to remind the reader that the license type was valid in the hunting district, but any kill that occurred using those licenses is reported either as "GEN MR WT" or as "UNKNOWN", depending on whether the kill was made before or after November 27. The result is that the kill statistics for each district should still be accurate, but the "698-00" kills are combined with the "GEN MR WT" kills.

TIME PERIOD OF KILL

PREFACE

1994 DEER TIME PERIOD OF KILL REPORT

Survey Approach

Resident and nonresident deer license holder samples were randomly selected from a population of all resident and nonresident deer license holders in our license database. Deer hunting and harvest data were acquired via telephone for resident license holders and via a mail survey for nonresidents.

Definitions

UNKWN...............	A symbol for unknown used to designate unknown time period of kill
GEN A...............	An abbreviation for general deer "A" license, including those deer "A" licenses included with the resident Sportsman's license and nonresident Big Game Combination and Deer Combination licenses
GEN MR WT...........	An abbreviation for general, Multi-region, Antlerless Whitetail Deer B license
GEN MR MD...........	An abbreviation for general, Multi-region, Antlerless Mule Deer B license
SP..................	An abbreviation for special license or permit
UNKNOWN.............	A license category where the license used to take the deer was unknown

Explanations

The deer time period of kill statistics are from a sample of 54,898 questionnaires representing about 27 percent of all 204,681 deer licnese holders. No expansions or estimates are given. The percentages are from the actual sample data collected. Sample number killed in each license category is given on the right side of each page. To obtain estimates of the actual number killed in a given time period, the percentages can be applied to the kill statistics in the hunting and harvest section of this report.

All valid response data are used in the analyses even when some data fields are missing. This is the reason for the various unknown categories given in the report. The unknown license type given in the harvest sections is used to represent deer kills which could not be associated with a particular licnese/season type. Hunting or harvest activity in an unknown or invalid hunting district within a valid region is represented as "RXX" where R is the regional number 1 through 8. An unknown district in an unknown region is represented as "XXX". The unknown district or region activities are still incorporated into the regional or state totals respectively.

ANTLER STATISTICS

PREFACE

1994 DEER ANTLER STATISTICS

Survey Approach

Resident and nonresident deer license holder samples were randomly selected from a population of all resident and nonresident deer license holders in our license database. Deer hunting and harvest data were acquired via telephone for resident license holders and via a mail survey for nonresidents.

Definitions

ANTLER TYPE...The number of points on each side
FREQUENCY.....The number of occurances of the given antler type in the given hunting unit within the sample data obtained
PERCENT.......The percentage of the total represented by each frequency

Explanations

The deer antler point statistics are from a sample of 54,898 questionnaires representing about 27 percent of all 204,681 deer licnese holders. No expansions or estimates are given. The frequencies and percentages are from the actual sample data collected. Total sample number killed in each hunting unit is given at the bottom of the frequency column. To obtain estimates of the actual number killed with a particular antler point count the percentages can be applied to the kill statistics for bucks in the hunting and harvest section of this report.

All valid response data are used in the analyses even when some data fields are missing. This is the reason for the unknown hunting unit categories given in the report. Kills in an unknown or invalid hunting district within a valid region are represented as "RXX" where R is the regional number 1 through 8. An unknown district in an unknown region is represented as "XXX". The unknown district or region activities are still incorporated into the regional or state totals respectively.
